

Mobile Streaming

Client support for iPhone, iPad, Blackberry, and Android
Server support and Content Delivery Network

Mobile Media Delivery Client

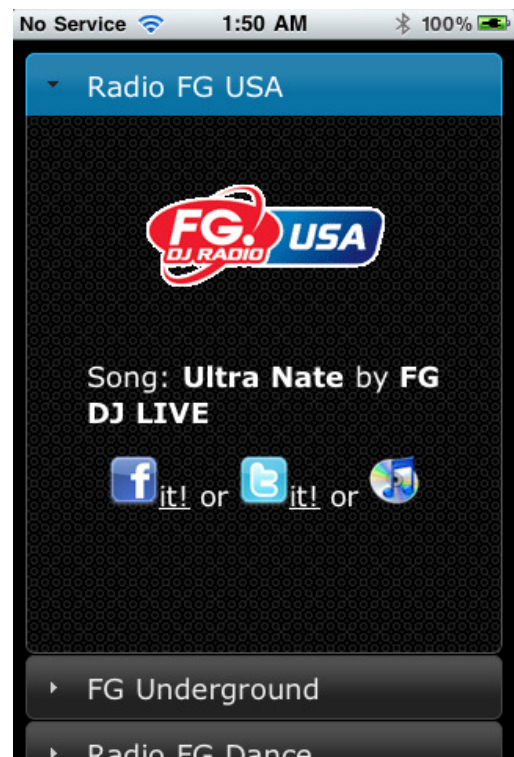

EGLA COMMUNICATIONS provides a multi-platform application for media streaming in popular platforms. The Mobile Client adapts to work with our CDN network and is customizable to meet customer specifications.

Application architecture

- The application UI (User Interface) can be written in HTML
- Native support for Facebook and Twitter
- Title and Song information could be embedded on M3U file or provided from an XML source
- Android, iPhone/iPad, and Blackberry support.

Standalone Library

- Support to start/stop media stream
- Restore media streaming in case of failure on link
- Configuration file contains URLs to all media sources in m3U format or the url to the media source with an MP3-ready stream
